CMPR 121 – Final Project

Student Government President

Election Results Software Application

According to Wikipedia, a student government president is the highest-ranking officer of a student union. Student performing in this role typically serves a ceremonial and managerial purpose. The president's duties and powers are diverse.

To elect a new president for their student government in Orange County, four community colleges will participate in the election process, namely:

1. Santiago Canyon College
2. Santa Ana College
3. Orange Coast College
4. Coastline Community College

Students who wish to run for presidency, will pursue students form the above colleges to vote for them.

As a software engineering team, you are invited to design, create, implement, and test an application that will display the election results. As of now the specifications of the project are still fluid and keep changing daily as the four community colleges are trying to agree on the full functionality of the application. Therefore, this project will have several parts. **Your software engineering team will need to fully implement each part before working on the next one**.

Please note that there are multiple software engineering teams who are competing to provide the best application. As a matter of fact, there will be a prize for the top three applications.

Software engineering teams will be formed from the two sections of CMPR-121. We expect to have a list of the all participating teams very soon.
